

Data-Dex: Ultimate Stat Lab

-- Instructor Cheat Sheet --

Use this guide to help students and highlight interesting facts during the Data-Dex Stat Lab session.

Level 1: Basic Navigation

Q: The Tiny Titan (Height < 1'8", Attack > 100)

A: Kartana. It is only 1'0" (0.3m) tall but has a massive 181 Attack!

Tip: Kartana is made of paper but is sharper than a samurai sword.

Q: Speed King (Fastest Type Average)

A: Electric.

Tip: Many kids guess Fire or Flying, but Electric consistently has the highest average speed.

Level 2: Comparing Data

Q: The Shape of Stats (Mew vs. Deoxys Normal Forme)

A: Mew is a perfect hexagon (100 in every stat). Deoxys is a 'Glass Cannon' with huge spikes in Attack and Speed, but almost no Defense.

Tip: Even though they have the same 'Total' power (600), they play completely differently!

Q: Above the Bar (HP vs. Global Average)

A: The Global Average HP is approximately 70.

Tip: Even 'strong' Pokémon like Gengar actually have below-average HP.

Q: Trainer vs Pokémon

A: Subjective comparison.

Tip: Most kids will be taller than a Pikachu but much lighter than a Charizard!

Level 3: Finding Outliers

Q: Deceptive Appearances (Tiny but ultra-heavy)

A: Cosmoem. It is only 4 inches (0.1m) tall but weighs 2,204 lbs (999.9kg)!

Tip: That's as heavy as a car, but it can fit in your hand. It's the densest Pokemon in the universe.

Q: The Unbreakable Wall (Highest Defense + Special Defense)

A: Shuckle. It has 230 Defense and 230 Special Defense, but only 10 Attack.

Tip: Shuckle is the ultimate tank--it can't hurt you, but you can't hurt it either!
